In the original article entitled “Prognostic Value of P-POSSUM and Osteopenia for Predicting Mortality After Emergency Laparotomy in Geriatric Patients” [1] which was published in July 2019 issue of the journal, there was an error in the specified mortality

outcome in the manuscript. The published version describes 30-day mortality, however, the correct outcome measure should be 90-day mortality throughout the article. The article has been corrected accordingly online.
